Demonstration Overview

The demonstration video presents the complete implementation of the Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer project in ServiceNow. It covers the configuration of the laptop procurement request, Flow Designer automation, approval process, automatic task creation and assignment, status updates, notifications, testing, and completion of the request.

Phases Demonstrated

1. Phase 1 – Create the Update Set

Creating the project update set and making it the current update set for the ServiceNow project.

2. Phase 2 – Configure the Laptop Request

Configuring the required request details for the standard laptop order, including employee information, laptop requirements, and other necessary request fields.

3. Phase 3 – Configure the Request Process

Setting up the required request and approval configuration to ensure that the laptop request follows the defined procurement process.

4. Phase 4 – Create the Flow Designer

Creating the Flow Designer workflow to automate the standard laptop procurement process. The flow is configured with the required trigger, conditions, actions, and approval steps.

5. Phase 5 – Configure Automatic Task Creation

Configuring the flow to automatically create the required IT or procurement task after the laptop request is approved.

6. Phase 6 – Configure Task Assignment and Status Updates

Configuring automatic task assignment to the responsible team and updating the request status as the procurement process progresses.

7. Phase 7 – Configure Notifications

Configuring notifications to inform the employee about important stages of the

laptop request, such as approval, processing, and completion.

8. Phase 8 – Test the Flow

Creating a sample standard laptop request and verifying that the Flow Designer executes correctly, including approval, task creation, assignment, status updates, and notifications.

9. Phase 9 – Verify and Complete the Request

Verifying the complete workflow from request submission to laptop fulfilment and completion, and confirming that all configured automation works as expected.

Demonstration Outcome

The demonstration shows the complete working flow of the project, from standard laptop request submission to approval, automatic task creation and assignment, status updates, notifications, and request completion, confirming the implementation of the proposed IT procurement automation solution.
