

PHASE 2 – REQUIREMENT ANALYSIS

MODULE 2.1 – CUSTOMER JOURNEY MAP

2.1.1 Introduction

The Customer Journey Map is used to understand the complete experience of an employee requesting a standard laptop through the IT procurement system. It represents the different stages involved from the initial requirement of the laptop to the successful completion of the request.

In a traditional procurement process, employees may have to communicate with multiple teams, wait for approvals, and follow up to know the current status of their requests. By understanding this journey, the project can identify areas where automation can improve the employee experience.

The proposed project, “Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer,” focuses on creating a smooth and automated journey for employees requesting standard laptops.

2.1.2 Customer Persona

Primary Customer: Employee requesting a standard laptop

The employee requires a standard laptop for performing their work-related activities. The employee expects the procurement process to be simple, transparent, and completed within a reasonable time.

2.1.2 Customer Journey Stages

Stage 1 – Identifying the Need

The employee identifies the requirement for a standard laptop to perform their work.

Employee Action:

- Identifies the need for a laptop.
- Decides to submit a laptop request.

Expectation:

- Easy access to the request process.
- Clear information about the available standard laptop.

Stage 2 – Submitting the Request

The employee submits a laptop request through the ServiceNow Service Catalog.

System Action:

- Opens the laptop request form.
- Enters the required information.
- Submits the request.

Employee Experience:

- Simple form.

- Minimum unnecessary information.
- Confirmation after submission.

Stage 2 – Request Review and Approval

After submission, the request enters the automated workflow and is sent for the required approval.

System Action:

- Flow Designer triggers the workflow.
- Request is routed for approval.
- Approval status is recorded.

Employee Expectation:

- Quick approval.
- Visibility into the request status.

Stage 4 – Procurement Processing

After approval, the procurement or IT team begins processing the laptop request.

System Action:

- Creates or assigns the required task.
- Sends the task to the appropriate team.
- Updates the request status.

Employee Expectation:

- No need for repeated follow-ups.
- Clear progress updates.

Stage 5 – Laptop Fulfilment

The IT/procurement team completes the required activities and provides the laptop to the employee.

Team Action:

- Processes the approved request.
- Arranges the standard laptop.
- Updates the request.

Employee Expectation:

- Timely fulfilment.
- Confirmation when the laptop is ready.

Stage 6 – Request Completion

Once the laptop is provided, the request is marked as completed.

System Action:

- Updates the request to the completed state.
- Records the final details.

- Sends completion notification.

Employee Experience:

- Receives confirmation.
- Can view the completed request record.

2.1.4 Customer Journey Map

Journey Stage	Employee Action	System Action	Pain Point	Expected Experience
Need Identification	Identifies laptop requirement	Provides access to request	Unclear process	Clear request option
Request Submission	Submits laptop request	Records request	Manual submission	Simple form
Approval	Waits for approval	Routes request automatically	Approval delays	Faster processing
Procurement	Waits for processing	Creates/assigns tasks	Repeated follow-ups	Automated task handling
Fulfilment	Receives laptop	Updates status	Lack of updates	Clear progress
Completion	Confirms receipt	Closes request	Manual closure	Automatic completion

2.1.5 Key Customer Pain Points

- Manual request processing.
- Delays in approval.
- Repetitive communication.
- Lack of request status visibility.
- Manual task assignment.
- Difficulty tracking the procurement process.

2.1.6 Opportunities for Improvement

- Automating the approval process.
- Using Flow Designer for workflow automation.
- Automatically assigning tasks.
- Providing status updates.
- Sending notifications at important stages.
- Maintaining centralized request records.

2.1.7 Conclusion

The Customer Journey Map provides a clear understanding of the employee's experience during the laptop procurement process. It highlights the major stages, pain points, and expectations of the user. The identified issues support the need for an automated solution using ServiceNow Flow Designer, which can simplify the process and improve visibility from request submission to completion.
