

PHASE 2 – REQUIREMENT ANALYSIS

MODULE 2.2 – SOLUTION REQUIREMENT

2.2.1 Introduction

The Solution Requirement defines the features and capabilities required to implement the proposed automated laptop procurement system. The main objective is to create a structured workflow that can process standard laptop requests with minimum manual intervention.

2.2.2 Proposed Solution

The proposed solution uses ServiceNow Flow Designer to automate the standard laptop procurement process.

When an employee submits a laptop request, the system triggers a predefined flow. The flow handles the required approval, creates or assigns procurement tasks, updates the request status, and sends notifications to the relevant users.

2.2.2 Functional Requirements

1. Laptop Request Submission

The system should allow employees to submit a standard laptop request through ServiceNow.

2. Request Information

The system should capture important information such as:

- Employee details
- Laptop requirement
- Request description
- Required date
- Additional information, if applicable

2. Automated Workflow

After submission, Flow Designer should automatically initiate the procurement workflow.

4. Approval Management

The system should send the request to the appropriate approver and record the approval decision.

5. Task Assignment

After approval, the system should create or assign tasks to the responsible IT/procurement team.

6. Status Management

The request status should be updated as it moves through different stages.

7. Notifications

The system should provide notifications for important events such as:

- Request submission
- Approval

- Rejection
- Task processing
- Completion

8. Request Tracking

Employees and authorized teams should be able to track the current status of the request.

2.2.4 Non-Functional Requirements

Usability

The system should provide a simple and user-friendly request process.

Reliability

The automated flow should execute consistently according to the defined workflow.

Security

Only authorized users should be able to access or modify procurement information.

Maintainability

The workflow should be easy to maintain and modify when organizational requirements change.

Efficiency

Automation should reduce repetitive manual activities and improve processing efficiency.

2.2.5 System Requirements

- ServiceNow instance
- Service Catalog
- Flow Designer
- Appropriate user roles and permissions
- Request and task tables
- Notification configuration

2.2.6 Expected Benefits

- Reduced manual effort.
- Faster request processing.
- Consistent workflow execution.
- Better request tracking.
- Improved communication.
- Reduced repetitive administrative tasks.

2.2.7 Conclusion

The solution requirements define the necessary features for automating standard laptop procurement. By combining ServiceNow Service Catalog and Flow Designer, the system can provide a structured workflow from request submission to completion.
