

PHASE 4 – PROJECT DESIGN

MODULE 4.1 – PROBLEM SOLUTION FIT

4.1.1 Introduction

Problem Solution Fit explains how the proposed project addresses the problems identified during the earlier phases. The main problem identified in this project is the manual and time-consuming process involved in standard laptop procurement.

The project aims to connect each identified problem with a specific solution using ServiceNow and Flow Designer.

4.1.2 Identified Problems

The major problems in the existing laptop procurement process are:

- Manual submission and processing of laptop requests.
- Delays in the approval process.
- Repetitive work for IT and procurement teams.
- Manual assignment of tasks.
- Difficulty in tracking request progress.
- Lack of timely communication.
- Employees needing to follow up for updates.
- Lack of a structured and centralized workflow.

4.1.3 Proposed Solutions

The proposed project provides solutions for each identified problem.

Identified Problem	Proposed Solution
Manual request processing	Use a ServiceNow request form
Approval delays	Automate the approval process
Repetitive manual work	Use Flow Designer automation
Manual task assignment	Automatically create and assign tasks
Poor status visibility	Provide request status tracking
Communication gaps	Use automated notifications

Frequent employee
follow-up

Send automatic status updates

Unstructured process

Use a centralized ServiceNow
workflow

4.1.4 Problem-Solution Relationship

The solution is designed around the actual requirements of the employee and the IT/procurement team.

When an employee submits a standard laptop request, the system captures the required information and triggers the predefined Flow Designer workflow. The request can then move through approval and task-processing stages without requiring every step to be manually initiated.

This creates a direct connection between the identified problem and the proposed solution.

4.1.5 Value Provided by the Solution

The proposed solution provides value to different users.

For Employees:

- Simple request submission.
- Better visibility of request status.
- Timely notifications.
- Reduced need for follow-up.

For IT and Procurement Teams:

- Reduced repetitive work.
- Structured task management.
- Automated workflow execution.
- Centralized request information.

For the Organization:

- More consistent procurement processing.
- Better process visibility.
- Reduced manual dependency.
- Improved workflow management.

4.1.6 Expected Result

The Problem Solution Fit demonstrates that the proposed system directly addresses the major limitations of the existing process.

The expected result is a more organized workflow in which laptop requests are submitted, approved, processed, and tracked through ServiceNow.

4.1.7 Conclusion

The Problem Solution Fit confirms that the proposed ServiceNow Flow Designer solution is aligned with the problems identified during the project analysis.

By connecting each problem with a specific automated feature, the project provides a structured approach to improving standard laptop procurement.
